

1. Introduction and Purpose of the Project

1.1 Introduction

The idea of our project is to design and develop a supermarket management system that aims to streamline the checkout process for customers and improve the efficiency of the store's operations. The system will allow customers to collect their items and automatically calculate the total cost. It will also keep track of inventory and sales data, allowing store managers to have real-time visibility into their business.

1.2 Purpose of the Project:

The purpose of this project is to provide a convenient and efficient way for customers to pay for their purchases at the supermarket. It aims to reduce the time and effort required for the checkout process, which will ultimately improve the customer experience and increase customer satisfaction. Additionally, the system will provide valuable data for store managers, such as sales and inventory data, which can be used to make informed business decisions. Overall, the goal of the supermarket management system is to improve the store's operations and enhance the customer experience.

2. Features and Functionality of the Project

2.1 Overview

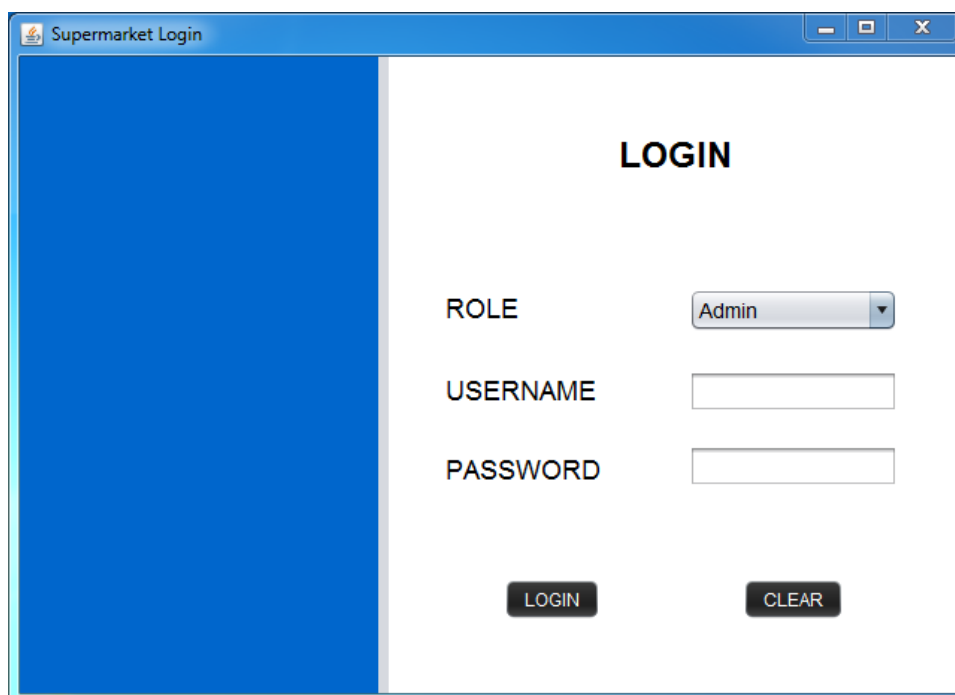

- Admin can add Sellers, Categories and Products under categories
- Seller can add products to Cart as per Customer's requests
- A Bill is printed out as PDF
- A Database is maintained for all Sellers, Categories and Products

2.2 Functions in detail

2.2.1 Login Page

On the login page, the user will be able to select their role as either an admin or a seller. This will determine the features and functionality that the user has access to within the system.

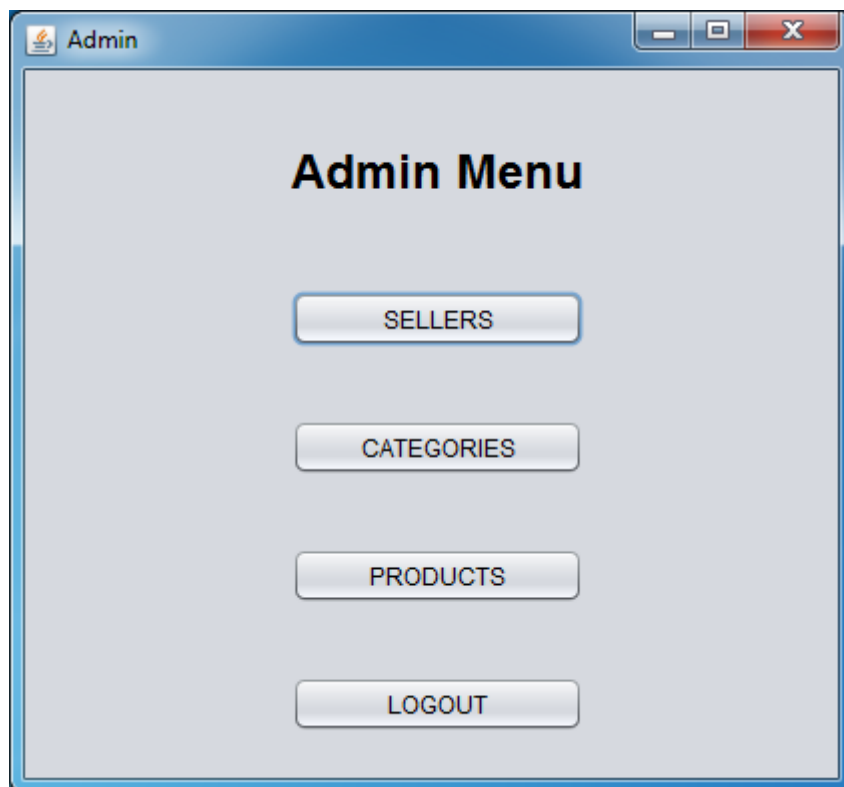

The user will be required to enter their login credentials, such as their username and password, in order to access the system.

The screenshot shows a web browser window titled "Supermarket Login". The window has a blue header bar with the title and standard window controls (minimize, maximize, close). The main content area is white and features a large blue sidebar on the left. The word "LOGIN" is centered at the top of the white area. Below it, there are three labels: "ROLE", "USERNAME", and "PASSWORD". The "ROLE" label is followed by a dropdown menu currently showing "Admin". The "USERNAME" and "PASSWORD" labels are followed by empty text input fields. At the bottom of the form, there are two buttons: "LOGIN" and "CLEAR".

2.2.2 Admin Module

a. Manage Sellers

- View all sellers registered in the database
- Add new seller

- Edit seller's information
- Delete seller

b. manage categories

- View all categories registered in the database
- Add new category
- Edit category information
- Delete category

The screenshot shows a window titled 'Categories' with a menu bar containing 'SELLERS', 'PRODUCTS', and 'LOGOUT'. The main area is titled 'MANAGE CATEGORIES' and contains two input fields: 'CATID' and 'NAME'. Below these fields are four buttons: 'Add', 'Edit', 'Delete', and 'Clear'. At the bottom, there is a section titled 'CATEGORIES LISTS' containing a table with the following data:

CATID	CATNAME
1	Groceries
2	Dairy Products
3	Drinks and Beverages
4	Cosmetics
5	Sports Equipment

This screenshot shows the 'Categories' application window with the 'MANAGE CATEGORIES' form. The 'CATID' field is filled with '1' and the 'NAME' field is filled with 'Groceries'. The 'Add', 'Edit', 'Delete', and 'Clear' buttons are visible. The 'CATEGORIES LISTS' table at the bottom shows the same data as the previous screenshot.

This screenshot shows the 'Categories' application window with the 'MANAGE CATEGORIES' form. The 'CATID' field contains 'groc' and the 'NAME' field contains 'Groceries'. An error dialog box titled 'Attention' is displayed in the center, with a red 'X' icon and the message 'Wrong Input Type!'. The dialog has an 'OK' button. The 'Add' and 'Clear' buttons are visible on the form. The 'CATEGORIES LISTS' table at the bottom shows the same data as the previous screenshots.

c. manage products under categories

- View all products registered in the database
- Add new product
- Edit product information
- Delete product

2.2.3 Seller Module

- **Add Products to Cart:** The seller will be able to add products to a virtual cart for the customer, by manually entering the product information.
- **View and Update Cart:** The seller will be able to view the contents of the cart and make any necessary updates, such as removing items or changing the quantity.
- **Calculate Total Cost:** The system will automatically calculate the total cost of the items in the cart.
- **Print Receipt:** The seller will be able to print a receipt for the customer's purchase, which will include a list of the items purchased and the total cost.
- **Database Maintenance:** The database is maintained and updated with the new available quantities of the products after the selling process.

The screenshot shows a web application window titled "Billing" with a "Logout" link in the top left. The main heading is "BILLING POINT". On the left, there are input fields for "PROD NAME" and "QUANTITY", followed by "Add to Bill" and "Clear" buttons. On the right, there is a dropdown menu set to "Groceries", and "Filter" and "Refresh" buttons. Below these is a table with 5 columns: PROD ID, PROD NAME, PROD QTY, PROD PRI..., and PROD CAT. The table contains 5 rows of product data. At the bottom left, there is a "BILL DETAILS" section with a table header: NUM, PRODUCT, PRICE, QUANTITY, TOTAL. At the bottom right, there is another table header: PRODID, PRODUCT, PRICE, QUANTITY, TOTAL. At the very bottom, there are "Print" and "Remove from Bill" buttons.
